# Instructions

You should not use a calculator to answer the questions in this test!

## Questions and answers

Try to work quickly and carefully.

Use the box for each question to put your answer in.

All answers should be given as a single value.

For questions expressed as mixed numbers or common fractions, the answers should be given as mixed numbers or common fractions.

**Go on to the next question**, if you are not able to do it. Come back to it at the end and try again to solve it.

**Check the calculation** in the solution booklet or ask your teacher for support.

## Marks

The number under the box on the top right of each question shows you the number of marks available for it.

Long multiplication and long division questions are worth **two marks each**. The correct answer will be awarded **two** marks. You may get **one** mark for showing a right method.

All other questions only get **one** mark each.
