New Vocabulary

Password

A password is a secret word that only you know. It might have jumbled up numbers and letters, to make it hard for someone to guess.

Prior learning

Technology

Systems that help us learn, communicate and play. Examples include computers, iPads, phones, smart TVs, games, toys and websites.

New Knowledge

Why do I need a password?

A password is a bit like a key to your door, you need to use one to get into your stuff.

A password may be needed for these situations:

To log into an iPad or a laptop

To buy something online

To play a game

To watch a film

To play music

A good password is very long. We can tell our trusted adults our passwords so they can keep them safe.

Some passwords are good, as people can't guess them easily.
