What Is Bar Modelling?

Bar modelling is where pictures or 'bars' are used to represent calculations and word problems.

Why Use Bar Modelling?

Sometimes calculations and word problems are difficult to visualise in your head. Bar models help you to *see* the maths more clearly.

Once you become confident in using bar models, you can use them to help your learning in many different areas of maths.

So where and how can bar models help you with addition and subtraction problems?

Bar Modelling

Look at this simple bar model.
What addition and subtraction calculations could it represent?

$$45 + ? = 100$$
$$100 - 45 = ?$$

$$45 + 55 = 100$$
$$100 - 45 = 55$$

So what number is missing from the bar model? How do you know?

Bar Modelling

In this type of inverse calculation there are always three **unknown** numbers.

To solve the problem, you just need to know **two** of the **unknown** numbers.

Bar Modelling

$$\text{part} + \text{part} = \text{whole}$$

$$\text{whole} - \text{part} = \text{part}$$

$$\text{whole} - \text{part} = \text{part}$$

Now it's your turn...

Could you tell me an addition or subtraction calculation to go with this bar model?

100

21

79

$$\begin{aligned} ? + 79 &= 100 \\ 100 - 79 &= ? \end{aligned}$$

$$\begin{aligned} 21 + 79 &= 100 \\ 100 - 79 &= 21 \end{aligned}$$

Now it's your turn...

Could you work with more complex numbers?

267

191

$$191 + ? = 267$$
$$267 - 191 = ?$$

76

$$191 + 76 = 100$$
$$267 - 191 = 76$$

Now it's your turn...

What about this
bar model? What kind
of calculation do you need to
perform here?

523

126

397

$$126 + 397 = ?$$
$$126 + 397 = 523$$

Using Bar Models to Solve Word Problems

Sunnymore Primary School has 284 pupils.
218 of the children have a school lunch and the rest bring a packed lunch.
How many children bring a packed lunch?

Can you think how a bar model could look for this problem?

Using Bar Models to Solve Word Problems

Sunnymore Primary School has 284 pupils.
218 of the children have a school lunch and the rest bring a packed lunch.
How many children bring a packed lunch?

284 pupils

218

school lunches

?

packed lunches

Using Bar Models to Solve Word Problems

So how many children bring a packed lunch?

$$284 - 218 = 66$$

284 pupils

218

school lunches

66

packed lunches

Using Bar Models to Solve Word Problems

Grace went on a shopping spree with her birthday money.
She spent £287 on clothes and £98 on some new computer game.
How much did she spend in total?

Can you think how a bar model could look for this problem?

Using Bar Models to Solve Word Problems

Grace went on a shopping spree with her birthday money.
She spent £287 on clothes and £98 on some new computer game.
How much did she spend in total?

Using Bar Models to Solve Word Problems

So how much did Grace spend in total?

$$£287 + £98 = £385$$

£385

£287

clothes

£98

computer game

Things to Remember

Remember when drawing your own bars:

Draw a rectangle for your 'bar' on your whiteboard, sheet or book.

Label the parts of your bar.

Decide whether you need to do an addition or a subtraction calculation.
